

POTS in a Box

The POTS in a Box replacement service was explicitly designed to support lifeline services (fire, alarm, elevator, pool, FirstNet) and other modem-based applications (credit cards, ATM, utility meters, fax, vending machines, safes) and regular analog phone service.

This service secures your emergency services and replaces your existing POTS lines from the phone company with a product that operates the same way but will be immune from carrier disconnections and price increases.

POTS IN A BOX CDS-9010

- Emergency Responder Access
- Integral Wi-Fi (Host & Client)
- LTE dual Cell carrier capable
- GPS capability option
- 12-Hour power failover battery
- Elevator, Paging, Taxi phone line (Autodial)
- Monthly managed voice service

Here's how it works:

We install a small box that plugs into your existing data network and has either 2 or 8 analog line outputs (RJ11). Next, we configure each line for the type of equipment we're connecting to (fax, alarm, fire, etc.) and then move the existing cables from those machines to plug into this box instead of the phone company's copper pairs. Once connected, we make some test calls or trigger an alarm, and then we're good to go!

Initial Fees:

- Equipment: CDS-9010 for \$399 or \$16/month, or CDS-9090 for \$699 or \$26/month
- Programming/Staging: \$49 per device
Installation: \$150/hour, a minimum of 2 hours (estimated 1 hour per line)
- Site Survey: \$300 for a 2-hour survey (recommended, but can be done by the customer).
- Number Porting: \$15 initial fee per number

Monthly Fees:

- \$39.99 fee per line (includes cellular backup) and unlimited calling
